

**inspired by nature:** beautifully practical tensile structures

fabric architecture  
design, manufacture and  
installation of tensile fabric  
structures for both external  
and internal applications

design & build • over 25 years experience • signature structures • installation

service • ISO 9001 • from concept to completion • pre-engineered solutions

# about us

A dedicated and enthusiastic team passionate about the design, manufacture and installation of tensile fabric structures for interior and exterior applications worldwide. We have specific departments that specialise in bespoke design and build structures as well as pre-design engineered "off the shelf" Signature Structures. With over 25 years experience in the field of tensiles encompassing design, form-finding, visualisation, patterning, engineering, manufacture and installation supported by offices throughout the UK. In response to the increasing awareness to climate change and the need for shade, we have recently opened offices in Texas and Florida.
